1. Drawings are required in this application because applicant failed to submit a drawing along with the specification. The Examiner had used the drawings from the PCT publication WO 02/04147 for understanding the invention only. Applicant must submit the required drawing in response to this office action. The requirement for submitting the required drawings will not be held in abeyance. Failure to response to the requirement may result in abandonment of the application.
2. Applicant is advised that the abstract which appears on the page of the PCT Gazette (or the front page of the pamphlet) of published international application number WO 02/04147 will be used as the abstract for this application.
3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
4. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by either Lester or Saives.

The scope of the claims reads on the prior art apparatus.

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 1725

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claim 3 is also rejected under 35 U.S.C. 103(a) as being unpatentable over either Lester or Saives and further in view of CH 661,883 and vice versa.

Lester and Saives shows to deliver molten metal through moving two opposed pistons in the injection cylinder. The invention of both patents is capable of providing various volume of molten metal needed for different castings. CH '883 shows to use one of the two opposed pistons to define a part of mold cavity such that to eliminate the use of sprue and thereby simplifying the die design. It would have been obvious to use one of piston to define the mold cavity as taught by CH '883 in the apparatus of either Lester or Saives in view of the advantage. It would also obvious to use the two opposed pistons movable within the chamber of injection cylinder for varying the volume of the molten metal for casting different castings as taught by Lester or Saives in the apparatus of CH '883 in view of the advantage.

7. The patent to Wagner is cited to further show the state of the art.
